

L&D Cloud Lantern

**A hot glue gun is required for this craft.
Glue gun not included in kit.**

SUPPLIES IN KIT

Paper lantern
Led Light
Fiberfill
Ribbon

Begin by opening your paper lamp. Be very gentle! The lamps are fragile and can tear if handled roughly. Identify the top and bottom part of the lamp: the smaller hole is the top and the wider hole is the bottom. Using a hot glue gun, begin adding fiberfill in small sections to cover the lamp. Working in small sections makes this process easier. Don't worry if your lamp doesn't look fluffy right away. As you build on your lamp, the fluffiness will grow. You can also add extra layers in your finishing touches.

Attach the light to the ribbon. The lights come with a small hole for convenience. Tie a knot to secure. On the top of the lamp, you should see a thin plastic piece. Loop your ribbon on the plastic and face the light down.

Turn on light, hang up and enjoy.
